

Have a great idea for an **Arduino** project? Don't know how to write the code? Don't give up! **Visuino** will make it happen!

Visuino is a visual, graphical development environment for **Arduino**.

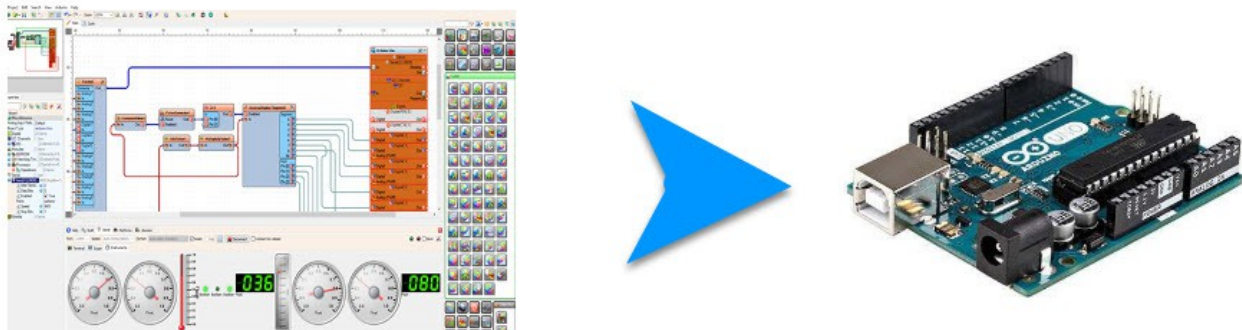

It allows easily creating complex **Arduino** and **IoT** projects, by simply dropping and connecting a few graphical blocks. **Visuino** will automatically generate the necessary **Arduino** code.

Programming with **Visuino** is as easy as picking components from the Components Toolbar, placing them in the Visual Design Area, connecting them, and setting their properties with the Object Inspector.

The Overview, allows easy navigation over big designs, and **Visuino** includes built-in Communication Terminal, Scope, and Gauges, and other Visual Instruments to monitor and display the data sent from **Arduino**.

Once your design is ready, by pressing a single button, **Visuino** will generate all the necessary **Arduino** code and will open the **Arduino** IDE where you can compile and upload to **Arduino**.

Don't let the coding stand in the way of your creativity. Visuino will do the coding for you!
